WEEKLY PROGRESS REPORT
On-the-Job Training
2nd Semester SY: 25-26

Student Name: Christopher D. Cariaga Jr. Course/Yr: BSIT 4th Year

OJT Site/Company Name: Symbol Sciences, Inc.

Date Covered: From January 26, 2026, to January 31, 2026 Week #: 6

COMPETENCY: Junior Software Engineer Intern

Duties Perform This Week:
- This week, I improved the Asset History and Audit Trail, enhanced frontend–backend integration, refined the UI, and ensured accurate and reliable system functionality.

What new trainings/took place this week?
- I learned audit trail implementation, improved Laravel system integration, managed database relationships, ensured accurate data recording, and practiced debugging and frontend–backend synchronization.

What were your major accomplishments based on the Activities in your Training?
- My major accomplishments include improving the Asset History module, ensuring accurate tracking and storage of asset transactions, enhancing the frontend interface, and testing the module for full functionality.

Provide a detailed description of the tasks involved in the accomplishments.

PROPOSED ACTIVITIES	ACCOMPLISHMENTS
• Improve Asset History tracking functionality • Test and validate audit trail records • Fix bugs and resolve data recording issues • Ensure proper integration between frontend and backend	• Enhanced backend logic to ensure all asset actions such as creation, updates, and transfers were recorded accurately. • Performed system testing to verify that asset history was properly saved and displayed in the system interface.

What problems have you encountered this week?
- I encountered issues with audit trail recording, frontend display, and backend–frontend synchronization.

How did you overcome or solve those problems?
- I reviewed the database and backend logic, debugged and tested asset actions, and fixed the frontend to correctly display asset history.

List one or two goals you have set for yourself next week.
- To further improve system performance and optimize database queries.
- To continue enhancing system features and ensure all asset modules are fully functional and user-friendly.

WEEKLY ACCOMPLISHMENT REPORT

On-the-Job Training

2nd Semester SY: 25-26

Student Name: Christopher D. Cariaga Jr. Course/Yr: BSIT 4th Year

OJT Site/Company Name: Symbol Sciences, Inc.

Date Covered: From January 26, 2026, to January 31, 2026 Week #: 6

COMPETENCY: Junior Software Engineer Intern

Date	Description of Activities	Time of work	No. of Hours	Verified By
1/26/26	Enhanced the Asset History module: reviewed asset transactions and improved backend logic for accurate recording.	8:00am - 12:00am 1:00pm - 5:00pm	8 Hours	
1/27/26	Tested audit trail functionality: verified asset transactions were recorded correctly; reviewed database relationships.	8:00am - 12:00am 1:00pm - 5:00pm	8 Hours	
1/28/26	Improved frontend display of Asset History: refined layout and table structure for clarity and usability.	8:00am - 12:00am 1:00pm - 5:00pm	8 Hours	
1/29/26	Debugged issues in recording asset actions; corrected backend logic to ensure all transactions are properly logged	8:00am - 12:00am 1:00pm - 5:00pm	8 Hours	
1/30/26	Tested frontend-backend integration: verified real-time updates in Asset History and proper synchronization of data.	8:00am - 12:00am 1:00pm - 5:00pm	8 Hours	
1/31/26	Final testing and validation of Asset History & Audit Trail module; confirmed data accuracy and system functionality.	8:00am - 12:00am 1:00pm - 5:00pm	8 Hours	
		Total No. of Hours:	48 Hours

WEEKLY PROGRESS REPORT
On-the-Job Training
2nd Semester SY: 25-26

Student Name: Christopher D. Cariaga Jr. Course/Yr: BSIT 4th Year

OJT Site/Company Name: Symbol Sciences, Inc.

Date Covered: From February 2, 2026, to February 7, 2026 Week #: 7

COMPETENCY: Junior Software Engineer Intern

Duties Perform This Week:
- This week, I developed the Asset Depreciation module, integrating multiple calculation methods with the Asset Life form and validating results in PHP and USD.

What new trainings/took place this week?
- Learned advanced depreciation methods, handled dynamic PHP/USD currency calculations, practiced frontend–backend synchronization for live updates, and improved form validation with inline error handling.

What were your major accomplishments based on the Activities in your Training?
- Successfully implemented the depreciation module with the Asset Financial Input Form, enabling auto-calculation of monthly and annual depreciation, allowing user overrides with validation, and ensuring PHP/USD currency conversions.

Provide a detailed description of the tasks involved in the accomplishments.

PROPOSED ACTIVITIES	ACCOMPLISHMENTS
• Implement depreciation calculation module • Integrate computation with Asset Financial Input Form • Enable currency conversion for PHP/USD	• Built backend logic to calculate depreciation using multiple methods (Straight-Line, Declining Balance, Units of Production). • Connected form fields to compute monthly and annual depreciation automatically upon input.

What problems have you encountered this week?
- Encountered incorrect calculation results when users entered asset life in months only.
- Some currency label updates were delayed or not reflecting correctly in real-time.

How did you overcome or solve those problems?
- Updated computation logic to handle **partial years and month-based depreciation**.
- Implemented **reactive frontend updates** to instantly reflect currency changes and ensure accurate display.

List one or two goals you have set for yourself next week.
- Integrate **depreciation reports** in the dashboard for Finance users.
- Begin implementing **approval workflow** for financial asset updates.

On-the-Job Training
2nd Semester SY: 25-26

Student Name: Christopher D. Cariaga Jr. Course/Yr: BSIT 4th Year

OJT Site/Company Name: Symbol Sciences, Inc.

Date Covered: From February 9, 2026, to February 14, 2026 Week #: 8

COMPETENCY: Junior Software Engineer Intern

Duties Perform This Week:
- This week, I implemented the Financial Approval Workflow for asset transactions, enabling Finance and Approver roles to review, approve, or reject updates, with real-time notifications and status tracking.

What new trainings/took place this week?
- Learned role-based approval workflows in Laravel, implemented real-time notifications and status updates, and improved handling of user permissions for authorized actions.

What were your major accomplishments based on the Activities in your Training?
- Successfully implemented a role-based financial approval workflow with real-time status updates and notifications, ensuring secure and accurate tracking of all approval actions.

Provide a detailed description of the tasks involved in the accomplishments.

PROPOSED ACTIVITIES	ACCOMPLISHMENTS
• Implement approval workflow for financial updates • Integrate notifications for approval status • Ensure role-based access	• Built backend logic for Finance and Approver to manage asset financial approvals. • Added real-time notifications for pending and completed approval actions.

What problems have you encountered this week?
- Initially, some approval actions were not properly updating the status in the database.
- Notifications were delayed for some users due to backend timing issues.

How did you overcome or solve those problems?
- Debugged the approval backend logic and corrected database update queries.
- Optimized notification triggers to ensure real-time updates for all users.

List one or two goals you have set for yourself next week.
- Implement **approval history and reporting** for Finance and Admin users.
- Begin developing **dashboard analytics for approved/rejected financial transactions**.
